GitHub Copilot in Action

*"A Developer's Journey, From Idea to
Code, One Scoop at a Time"*

GitHub Copilot in Action

"A Developer's Journey, From Idea to Code, One Scoop at a Time"

Randy Pagels

Principal Trainer | Xebia USA

Randy.Pagels@Xebia.com

Randy-Pagels

Agenda

- ◉ Who We Are at Xebia
- ◉ Getting Oriented with GitHub Copilot
- ◉ Prompting with the Right Context
- ◉ Quality Guardrails and Working Asynchronously
- ◉ Live Demo and Q&A

Established in 2014

100+
GitHub specialists

24 Microsoft MVPs
5 Regional Directors

Bi-weekly knowledge
exchange sessions,
quarterly Innovation Days

100+ conference sessions
every year

Innovation Days
every quarter

4 Microsoft Solution
Partner Designations

GitHub Overall Partner
Channel of the Year 2024
and Security Partner of the
Year 2024

Microsoft Global DevOps
Partner of the Year
2018 + 2019 + 2024

Azure Cloud Apps

Cloud-Native software development

DevOps Integration and Migrations

GitHub and Azure DevOps

Generative AI

Innovative AI Solutions

Together we drive change

At Xebia we build digital leaders! At Xebia Microsoft Services we do so on the Microsoft stack.

We partner with companies in their cloud journey on Azure, build modern cloud-native software, and enable organizations to emerge as digital leaders by implementing DevOps, using GitHub and Azure DevOps.

Vocabulary Used in AI

OpenAI

AI research lab advancing and promoting beneficial AI.

ChatGPT

OpenAI's AI model for generating conversational text.

Prompts

Initial text inputs guiding AI model responses.

Prompt Engineering

Crafting prompts to optimize AI responses.

Completions

AI-generated responses to given prompts.

LLM

Large Language Model, model that stores the relation between tokens

Sample models in GitHub Copilot

Model	Provider	Best For	Strength	Notes
GPT-5 mini	OpenAI	Everyday coding	Fast, accurate, multimodal	Great default choice
GPT-5.5	OpenAI	Deep reasoning	Strong debugging, architecture, analysis	Best for harder problems
Claude Sonnet 4.6	Anthropic	Thoughtful coding	Strong reasoning, clear summaries	Popular for complex tasks
Claude Opus 4.8	Anthropic	Deep reasoning	Complex problem solving and long-context work	High-end Claude option
Gemini 2.5 Pro	Google	Research and debugging	Long-context, strong analysis	Good for technical exploration
Gemini 3 Flash	Google	Quick tasks	Fast, lightweight responses	Good for simple asks
MAI-Code-1-Flash	Microsoft	General coding	Strong instruction following	Good day-to-day option

Sample models, not a complete list

Availability may vary by plan, admin settings, product surface, and rollout timing.

What is GitHub Copilot?

"GenAI tools like GitHub Copilot are just very well implemented text 'predictors'"

GitHub Copilot is your AI pair programmer, helping you write code faster and with less effort. It suggests whole lines or blocks of code as you type, based on the context of your project.

```
// Enhanced flavors with emojis and colors
const availableFlavors = [
  { id: 1, name: 'Vanilla Dream', emoji: '💜', color: 'fr'},
  { id: 2, name: 'Chocolate Fudge', emoji: '🍫', color: 'f'},
  { id: 3, name: 'Strawberry Bliss', emoji: '🍓', color: 'f'},
  { id: 4, name: 'Mint Chocolate Chip', emoji: '🍃', colo},
  { id: 5, name: 'Cookies & Cream', emoji: '🍪', color},
  { id: 6, name: 'Rocky Road', emoji: '🍫', color: 'from-'},
  { id: 7, name: 'Berry Burst', emoji: '🍇', color: 'from'},
  { id: 8, name: 'Pistachio', emoji: '🥜', color: 'from-g'},
  { id: 9, name: 'Lemon Sorbet', emoji: '🍋', color: 'fro'},
  { id: 10, name: 'Salted Caramel', emoji: '🍯', color: 'f'},
  { id: 11, name: 'Coffee Crunch', emoji: '☕', color: 'f'},
  { id: 12, name: 'Rainbow Sherbet', emoji: '🌈', color: 'f'},
];

const FlavorSelector: React.FC<FlavorSelectorProps> = ({ s
const handleFlavorClick = (flavor: Flavor) => {
  const isSelected = selectedFlavors.some(f => f.id ===

  if (isSelected) {
    // Remove flavor if already selected
    setSelectedFlavors(selectedFlavors.filter(f => f.id
  } else if (selectedFlavors.length < 3) {
    // Add flavor if under the limit
    setSelectedFlavors([...selectedFlavors, flavor]);
  }
};

return (
  <div className="gelato-card">
    <div className="flex justify-between items-center mb
      <h2 className="text-2xl font-semibold text-gray-800">
        🍦 Choose Your Flavors
      </h2>
      <div className="text-sm text-gray-600 bg-gradient-to-r from-pink-500 to-purple-500">
        {selectedFlavors.length}/3 Selected
      </div>
    </div>
  </div>
);
```

ChatGPT vs Copilot

OpenAI

- Separated experience
- Copy and pasting
- No context
- Limited capacity

- Integrated into the editor
- Trained on source code
- Type and continue (stay in the flow)
- Context:
 - - Open files
 - - Selected code
 - - Exceptions
 - - Coding style

GitHub Copilot License Comparison

	Free	Pro	Pro+	★ Copilot Business	Enterprise
Best for	Trying Copilot	Solo devs	Heavy individual users	Teams working together	Large, regulated orgs
Chat & Agent Mode	Limited access	Full access	Full access + more headroom	Full access, org-managed	Full access, org-managed
Org controls & policies	None	None	None	Central policies & audit logs	Advanced governance
How much you can use it	Low limits	Standard limits	Higher limits	Designed for team usage	Highest priority
 GitHub AI Credits	limited	1,500/mo	7,000/mo	*1,900 /user/m	*3,900 /user/m
Advanced models	Standard	Pro models	Pro+ models	Same as Pro+, centrally managed	Enterprise-only models
Price	Free	~\$10 / user / mo	~\$39 / user / mo	\$19 / user / mo	~\$39 / user / mo

* Pooled at org / ent. level.

GitHub Copilot Now Uses AI Credits

UBB – Usage Based Billing now in place as of June 1, 2026

As of June 1, 2026 - Billing overview

What is UBB?

Copilot usage is measured with AI Credits.
1 AI Credit = \$0.01 USD.

What consumes credits?

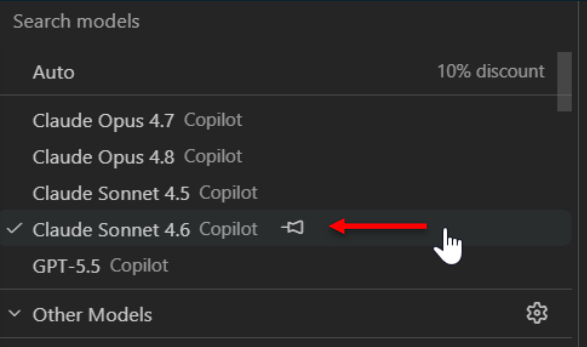

Chat, CLI, Copilot code review, agents, Spaces, Spark, and larger context use AI Credits. Code review also uses Actions minutes.

What is included?

Code completions and **Next Edit Suggestions** on paid plans do not use AI Credits.

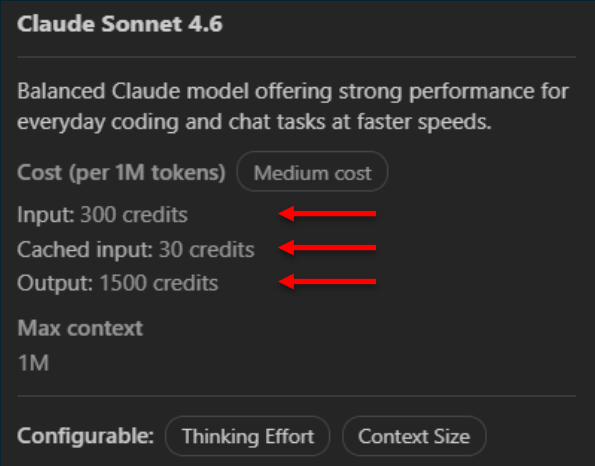

Model Selection

Shows the active model and credit rate. Use Auto/default first, then step up for harder work.

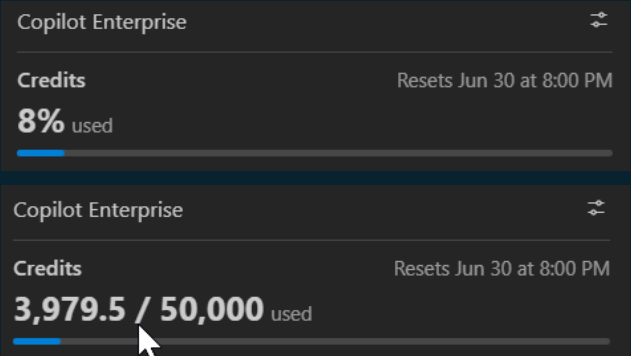

Model Information

Shows the selected model's credit rate, context size, and available options.

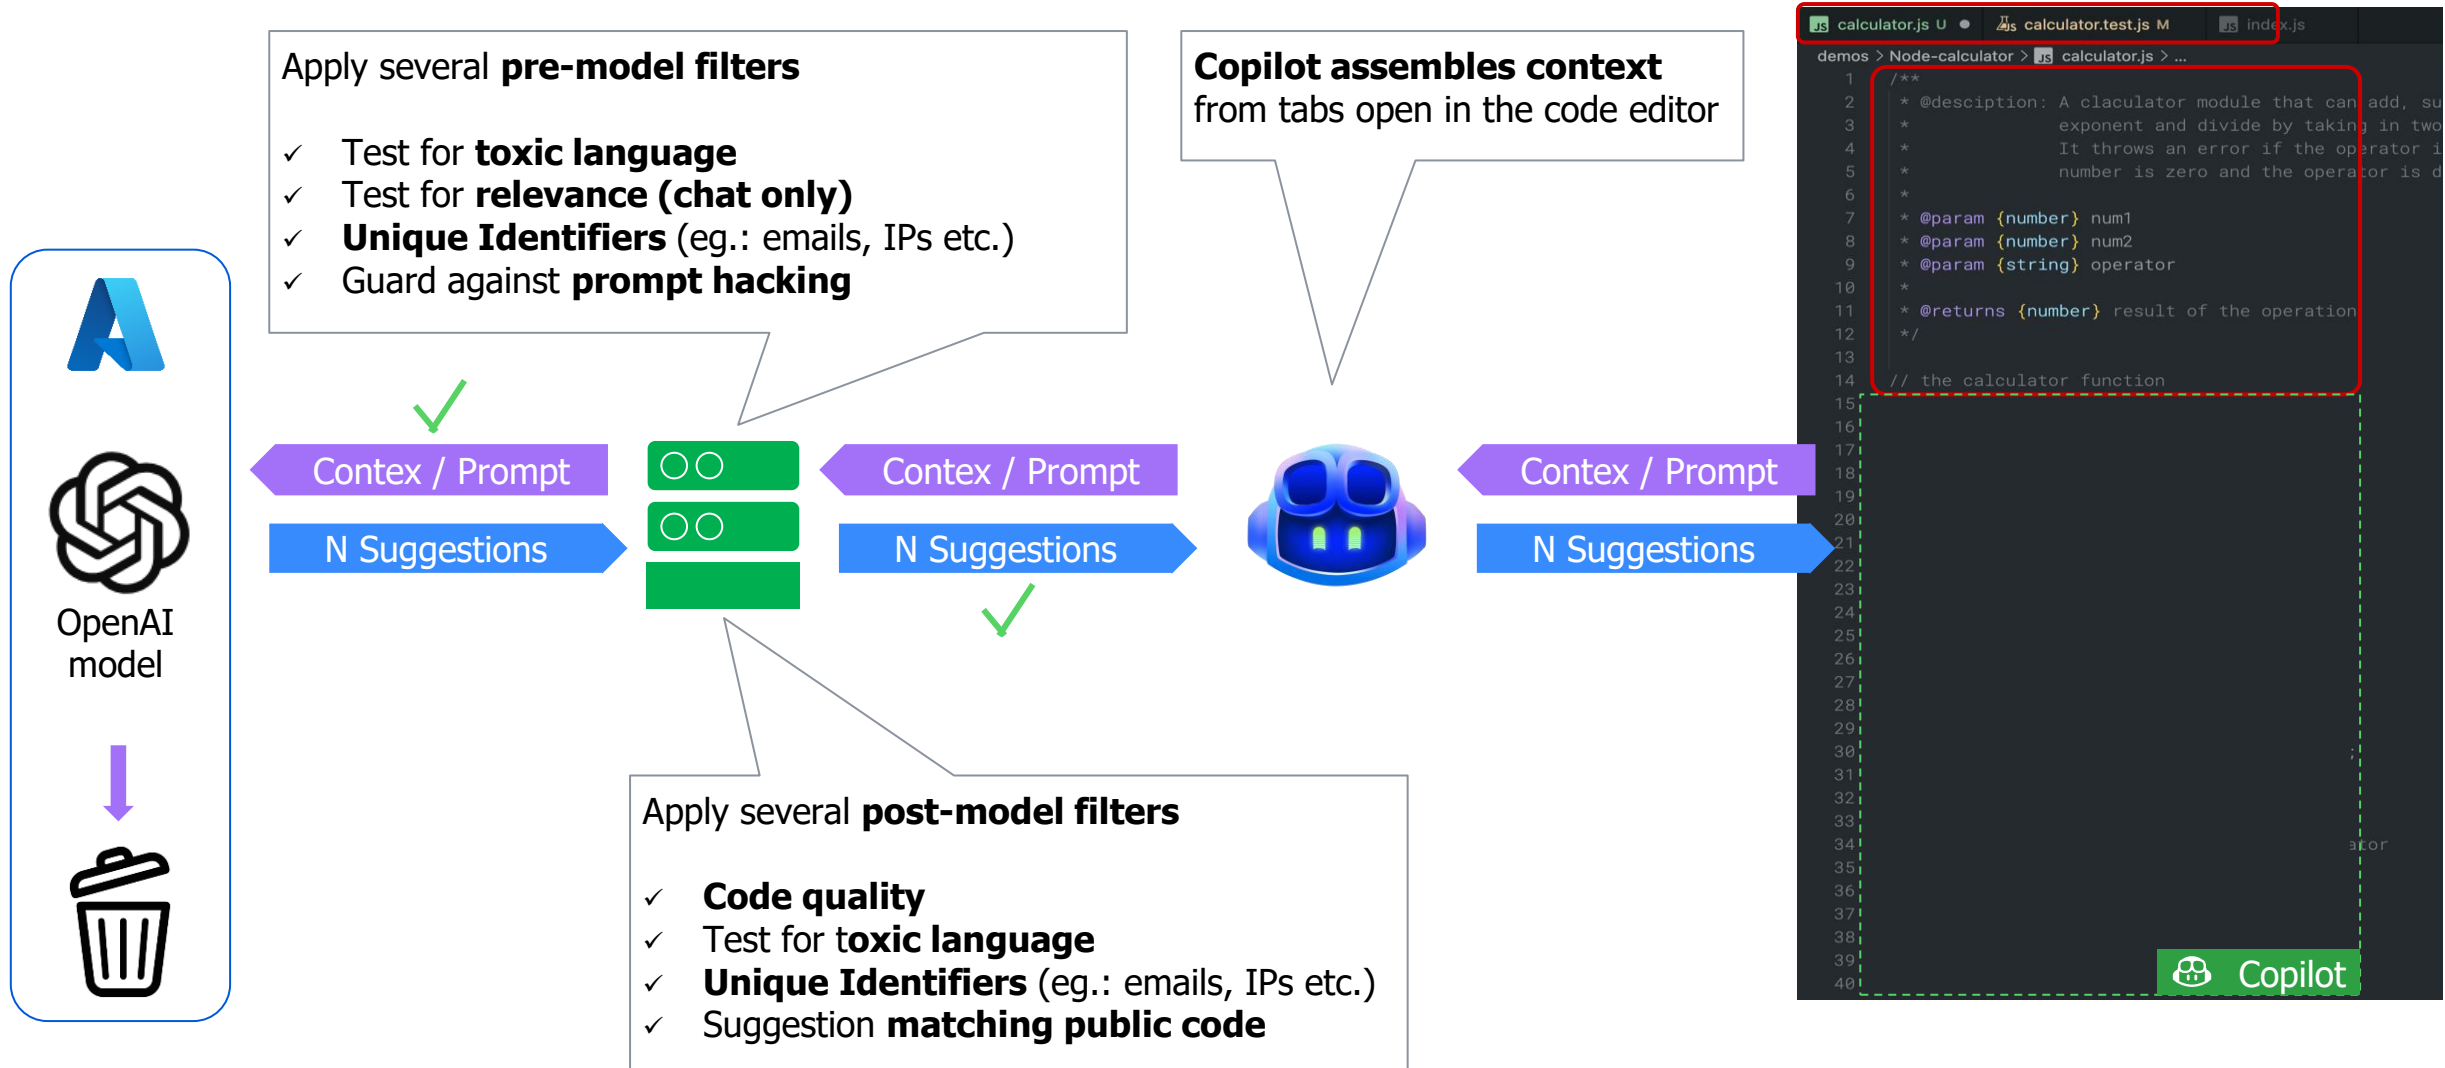

Credit Meter

Shows credit % used, credits used, allowance, and reset date. Use trends to coach usage and manage budgets.

How does GitHub Copilot work?

Security & Trust

Code and customer data

Prompts and suggestions are not used for training AI models.

Secure development

Prompts and Suggestions are filtered for security issues and PII data.

Personal data collection

Prompts and Suggestions are deleted. User interaction data is stored for 24 months.

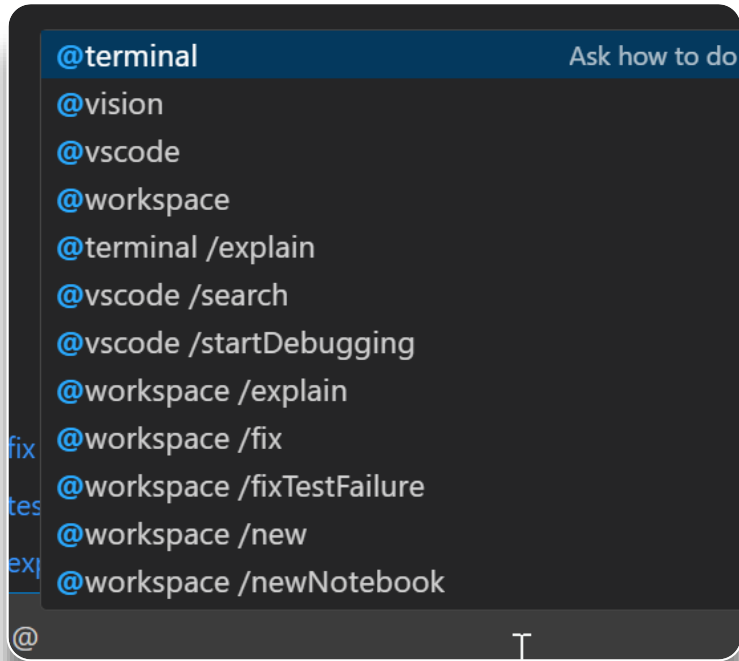

Intellectual Property Protection

Filter code suggestions snippets over 150 characters long

 Sorry, the response matched public code so it was blocked. Please rephrase your prompt. [Learn more.](#)

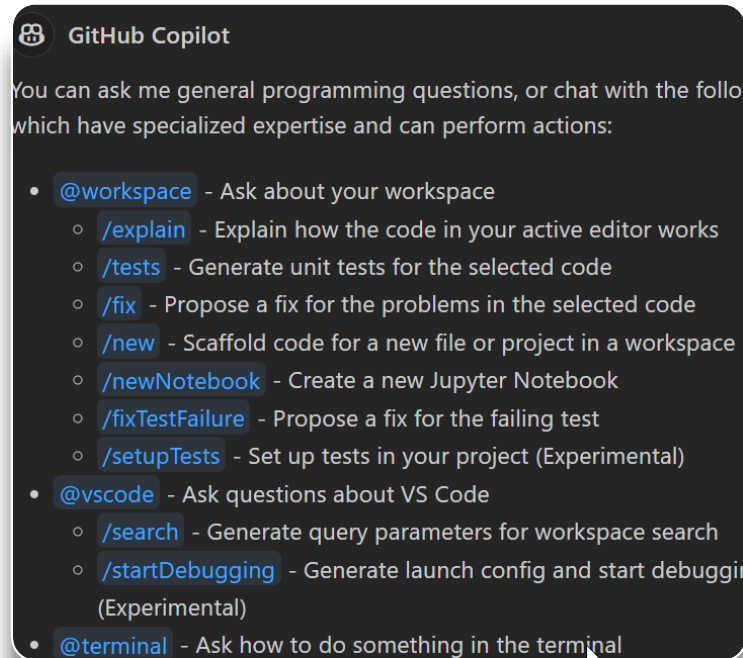

<https://resources.github.com/copilot-trust-center/>

Copilot Ask Mode Features

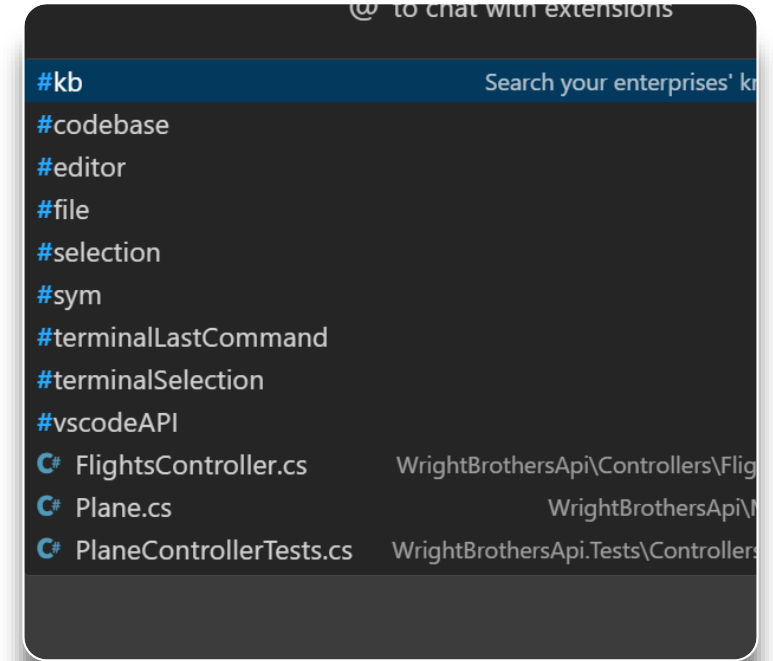

@ Custom Agents

Specialized experts for assisting with specific tasks

/ Slash Commands

Shortcuts allowing common operations

Chat Variables

Provides additional context for the prompt through variables

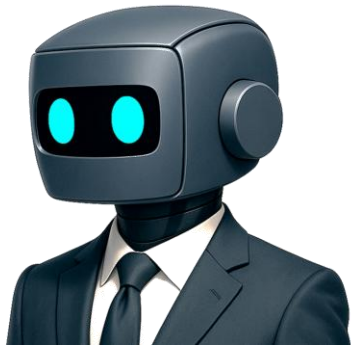

GitHub Chat Mode Differences

Copilot Ask
natural, conversational
assistance

Copilot Plan
strategic architecture and
project roadmap creation

Copilot Agent
step-by-step task guidance
and planning

	Ask	Plan	Agent
Best Use Case	Quick help, explanations , code suggestions	Architecting new features, creating development roadmaps, defining project structure	Multi-step workflows, tasks across files/projects
Strengths	Fast, easy to use , great for Q&A and inline completions	Strategic foresight, clear project visualization, aligns teams goals, proactive issue identification	Handles goals, file edits, planning , and coordination
Limitations	Context can be limited to current file/scope	Abstract, requires human validation , not for direct code generation	Still evolving, slower , may require cleanup

What is Prompt Engineering?

Prompt engineering is the process of designing and creating **high-quality prompts** that can be used to generate accurate and useful **code suggestions** with Copilot.

“The art of **coaxing** the **best** possible **result** out of a large language model”

- Jennifer Marsman
Principal Engineer, Microsoft AI Research

Zero-Shot Prompt

Create a C# model for a
CustomerLoyalty property.

The Anatomy of an Effective Prompt

1. ROLE (optional)

Who should the AI act as?

2. TASK

What do you want the AI to do?

3. CONTEXT

Background or example information

4. FORMAT

How should the output be structured

5. CONSTRAINTS (optional)

Rules or limitations to follow

Structured n-Shot Prompt

1. ROLE (optional) Who should the AI act as?
2. TASK What do you want the AI to do?
3. CONTEXT Background or example information
4. FORMAT How should the output be structured
5. CONSTRAINTS (optional) Rules or limitations to follow

ROLE

You are an experienced C# backend developer working on a .NET API.

TASK

Create a CustomerLoyalty record type and supporting logic.

CONTEXT

Example customer loyalty data:

Customer ID: **CUST-2026-001-PagelsR**

Customer since: **March 2026**

Loyalty tier: **Gold**

Total lifetime orders: **47**

Favorite flavor: **Pistachio**

Redeemable points: **350**

The implementation should follow the coding pattern used in **#orderscontroller.cs**.

FORMAT

Return C# code that includes:

- A CustomerLoyalty record type
- A Parse() method for constructing the object
- A CalculateDiscount() method that returns a decimal based on loyalty tier

CONSTRAINTS

- CustomerSince must be a DateTime
- Follow standard .NET naming conventions
- The code should compile in a typical .NET API project

Prompting Strategy

Ensure Clarity

Provide context, write clearly, and give Copilot quality input for better results

Group and Itemize Tasks

Breaking down complex tasks and use previous outcomes for efficiency

Organized approach

Leverage prompting patterns to solve complex problems

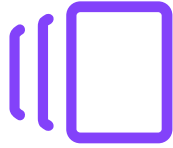

www.promptingguide.ai

Model Context Protocol (MCP)

Share context with LLMs

The Model Context Protocol (MCP) is an open standard that defines how applications share context with large language models (LLMs)

Extend Copilot capabilities

Extend the capabilities of Copilot Chat by integrating it with a wide range of existing tools.

Create new tools and services

Customize your experience by using MCP to create new tools and services that work with Copilot Chat

GitHub Copilot Cloud Agent

Agent Mode

- . Works inside IDE
- . Real-time collaborator
- . Iterates on code, run tests

Coding Agent

- . Works inside GitHub platform
- . Picks up issues assigned
- . Writes code, passes tests, and create PRs

End-to-End Agentic Development

- ✓ Shows how GitHub Copilot Agents support a full issue-to-merge workflow.
- ✓ Automates planning, coding, testing, and reviews in context.
- ✓ **Treat GitHub Copilot** as a **teammate** across feature work and validation.

Covers the full loop from **Issue** → **Branch** → **Code** → **Test** → **Review** → **Merge** → **Secure**

Gino has a problem and needs a simple solution

GitHub Copilot in Action

Gino's Gelato Demo

- ✓ Lap around GitHub Copilot
- ✓ Copilot inline code completions and suggestions
- ✓ Prompting Copilot to Build the app
- ✓ Agent Mode enabled with AGENTS.md

GitHub Copilot Fundamentals • MCP Servers • Coding Agents

The Solution works, but Gino has some challenges

GitHub Copilot in Action

Gino's Gelato Demo

- ✓ Coding Agent working in a separate branch
- ✓ Agent opening a PR and assigning reviewer
- ✓ Reviewing and merging the PR

Keeping the Gelato Line Moving • Automated Testing

Even when Gino is sleeping, the tests are still running...

GitHub Copilot in Action

Gino's Gelato Demo

- ✓ Gino adds automated UI testing with Playwright
- ✓ Tests run daily using GitHub Actions Workflows
- ✓ Failures and flaky tests are tracked automatically
- ✓ Trends show how quality changes over time

From zero to autonomous development!

"The Gelato Journey"

Zero → Assisted → Autonomous

AI for Coding – What Works Best!

AI speeds you up, but you're still in charge

Treat AI like a teammate—guide it, review its work, and refine results. **You are the pilot!!!**

Security comes first

Trust but verify. Always check and secure AI-generated code. (AI responses may be inaccurate)

Your expertise matters

The clearer your vision and knowledge, the better the AI helps you.

Iterate and learn

Coding with AI is about experimenting and improving together.

AI can boost productivity, but real progress comes from learning, adapting, and combining your skills with AI.
